# EARTHCON RESOURCES VII – HMS PROSPECTING LICENCE

## EARTHCON RESOURCES VII – HEAVY MINERAL SANDS

---

- ❖ Earthcon Resources VII Lda was granted HMS Prospecting Right 115008L on 28<sup>th</sup> August 2023 valid till 28<sup>th</sup> August 2028.
- ❖ The License is located at Chibuto district which is 80 km from Xai-Xai city in Gaza province.
- ❖ The License is located near the Chinese operating mine Dingsheng mining Heavy Mineral Sands. Dingsheng has invested more than USD 700 Million to process 10,000 tons of minerals a day.
- ❖ The data analysed and advanced remote sensing analysis the area owned by Earthcon Resources VII, shows high potential for HMS deposits, due to the similarities of the geological features with the proximal deposits.

Mozambican President Filipe Nyusi on Friday inaugurated a factory processing heavy mineral sands in Chibuto district, in the southern province of Gaza.

The factory belongs to the Chinese company Dingsheng and cost 700 million US dollars. It occupies an area of 3,000 hectares, and consists of two production lines with the capacity to process 10,000 tonnes of minerals a day (mostly titanium ores).

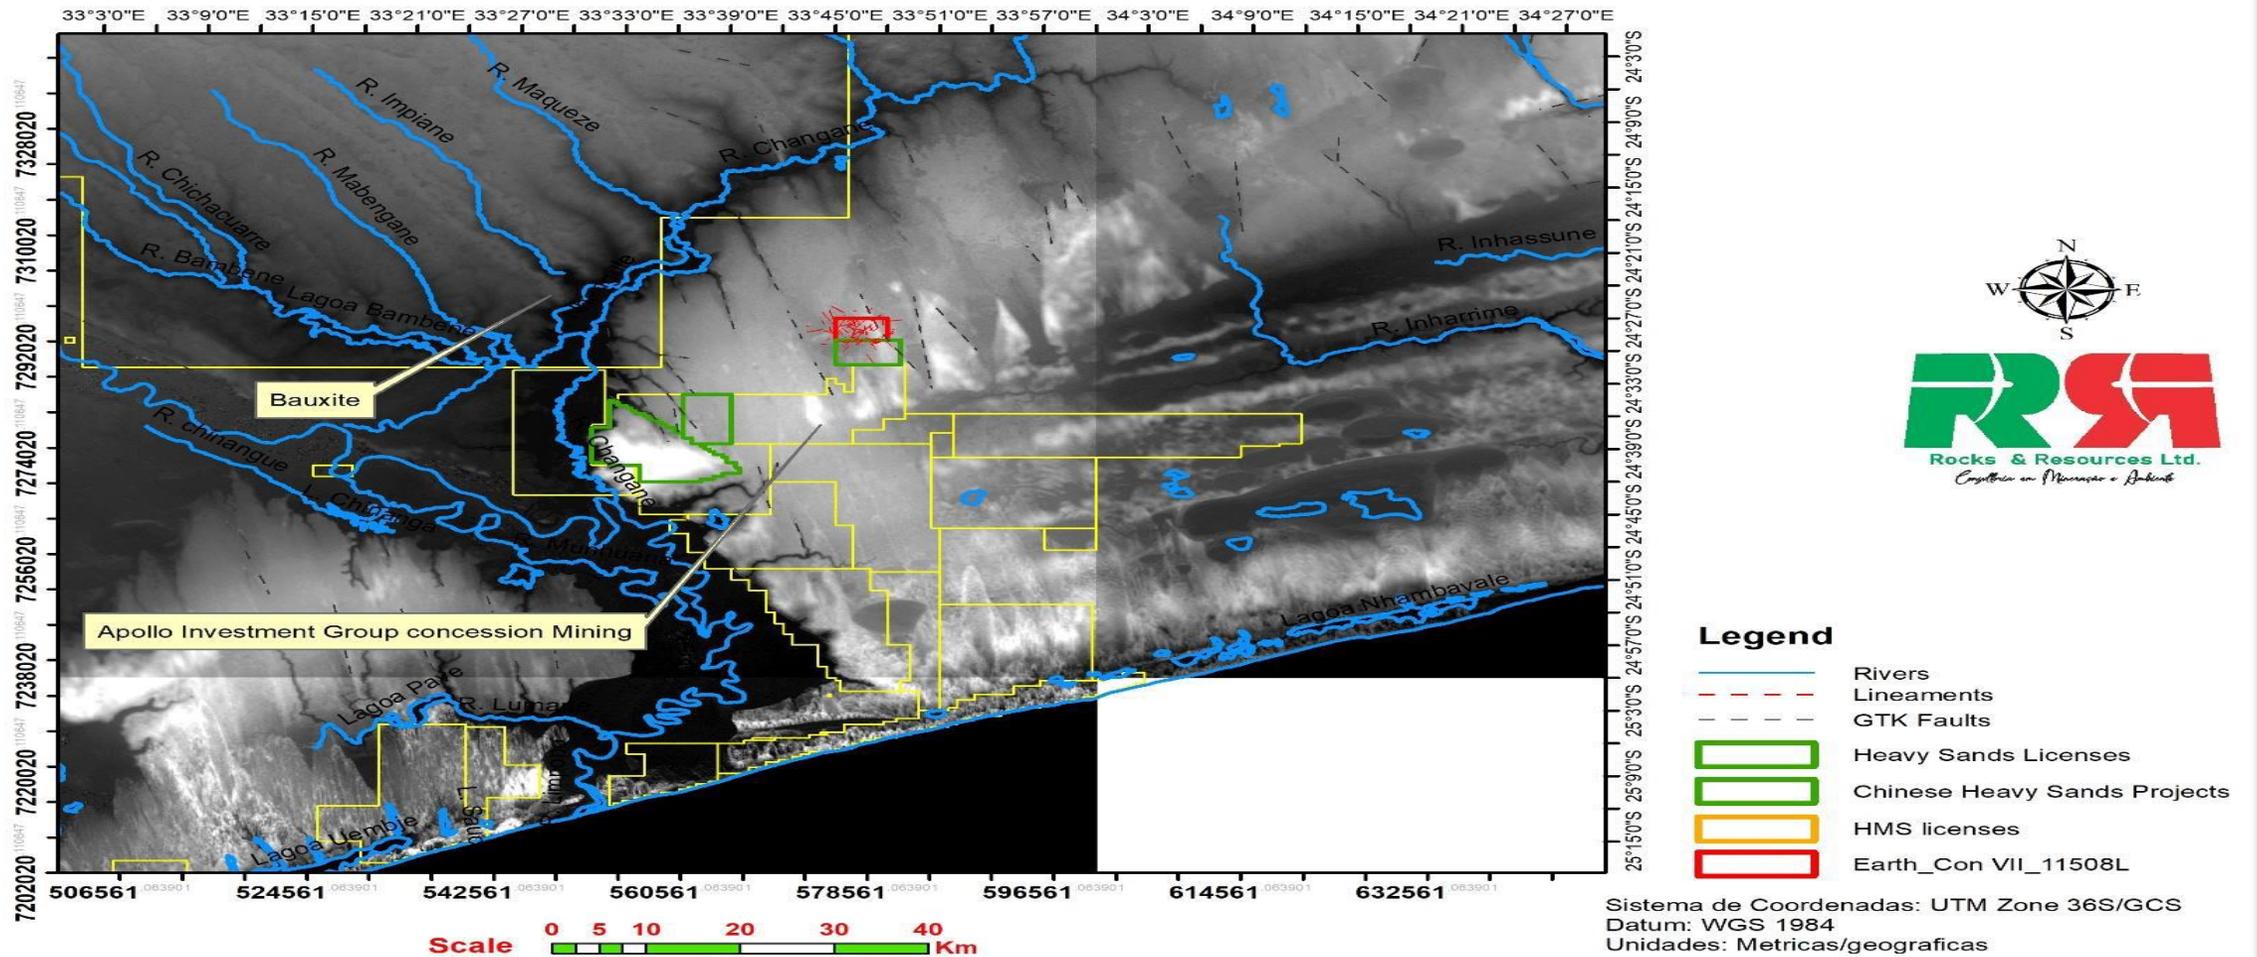

The heavy sands deposit in Chinuto is estimated at two billion tonnes, and has led Dingsheng to propose setting up a manufacturing industry alongside the mine. Nyusi said efforts are under way to ensue that all the added value chain occurs in Mozambique, in line with the government's "Industrialise Mozambique" programme (PRONAI), which has job creation as one of its main goals.

# EARTHCON RESOURCES VII – FIELD WORK

A large industrial facility, possibly a warehouse or processing plant, with a high ceiling and concrete floor. Two large, dark, conical piles of material are in the foreground. A conveyor system with a red frame and a black belt is visible in the background, extending across the top of the frame. The background shows a series of concrete pillars and a bright window or opening.
